

WARMING TRENDS[®]

CUSTOM FIRE FEATURES TO FIT ANY PROJECT

SUPERIOR PERFORMANCE | OUTSTANDING CUSTOMER SERVICE | MADE IN THE U.S.A.

ENDLESS POSSIBILITIES

LOOKING FOR SOMETHING UNIQUE?

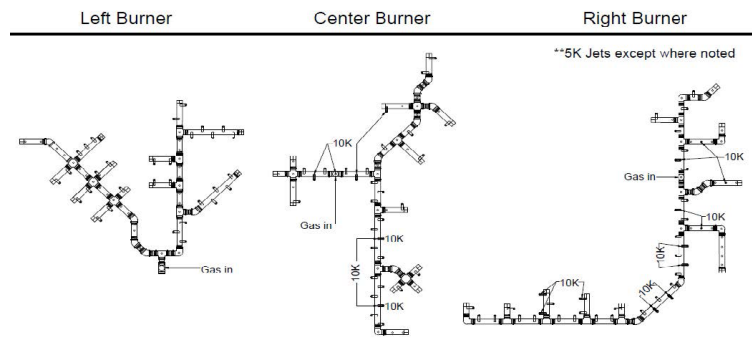

Whatever your vision, we can bring it to life.

Custom designs can range from something simple (e.g., a longer version of a standard linear burner) to very complex (e.g., burners to fit a vertical feature). The vision might be unconventional in placement such as in-ground or at the edge of a pool. No matter the idea, creating your next custom fire featured doesn't have to be complicated. Any vision can easily become a reality with Warming Trends' design expertise and unmatched manufacturing capabilities.

DREAM-TO-REALITY IN 3 STEPS

1. Our starting point is to gain a full understanding of the fire feature you envision.
2. Our in-house Engineering and Design team will then provide you with a drawing of the feature for your review, edits, and final approval.
3. Your feature is then manufactured in our Colorado facility, ensuring outstanding quality and the fastest custom project delivery in the industry.

CUSTOM IN-GROUND DESIGN

With boulders already in place, the landscape designer was tasked with creating an in-ground fire feature to "weave" through them. The designer began by spray-painting a burner layout to complement the boulders and accentuate the space with fire. They then built a template with PVC pipe.

Once we received the template, our in-house design team provided jet location suggestions based on the project's BTU supply and considering the proximity to various boulders.

Once final drawings were approved, the custom 3-section burner system was machined, assembled, and quality tested in our Denver area facilities. The burner system was then installed and completed with black lava rock for a stunning display.

(See cover page for completed project image.)
